# Introduction to Projections

**Using Projections Data**
Projections contained in these tables provide information for estimating job opportunities, developing training programs, and gaining insight into employment trends. However, before reaching any final conclusions, users should consider the following:

*Remember that these data are estimates.* They were developed on the assumption that historical trends will continue into the future. However, events may occur during the seven-year projection period that are impossible to predict. Events such as military base closures, major business closures or openings, and natural disasters can have a major impact on employment levels.

*Do not use these projections as your sole source of information.* Use other more recent sources of local economic data to corroborate the projection data. This information may be found in documents such as those published by the EDD's Labor Market Information Division, local chambers of commerce or economic development agencies.

*Projections employment data are annual averages.* These averages may not accurately portray seasonal occupations or industries such as those found in agriculture, retail sales, recreation and construction.

*Employment levels stated reflect workers who are covered by the Unemployment Insurance program.* As a result, industries that are made up largely of individuals who are self-employed will be understated. Examples include industries such as real estate, hair salons and bookkeeping. Occupations such as dental hygienists and consultants will also show an understated level of employment.

**Industry Projections**
Projections by industry forecast the anticipated changes within an industry over time. Forecasts are based on past employment trends and then are refined by a review of current economic developments.

Industry employment projections utilize employment data from both the Current Employment Statistics (CES) program and the Employment Payroll (ES202) program. There is a certain amount of error built into both systems. These errors may include employers classified in the wrong industry, incorrect employment levels reported by the employer and employment reported in the wrong county.

If a major industry category shows a decrease in future employment, it may be that only one or two industry components are experiencing the decline and other components are still expected to hire new workers. It is best to investigate all sectors of the industry. For example, retail trade has several components: building materials and garden supplies; general merchandise stores; food stores; automotive dealers and service stations; and apparel and accessory stores, to name a few.

Geographical differences account for differing employment opportunities. If an individual is considering relocating from one area of the state to another, the size of the industry and its expected growth level need to be kept in mind. Small rural counties will not have the same employment possibilities as do the larger metropolitan areas.

**Knowing Future Industry Trends**

- helps economic development professionals foster compatible growth and promote an area's strengths.
- helps government agencies, non-profit agencies, researchers and other interested parties formulate plans and proposals.
- helps people seeking work and those doing counseling and/or job placement learn about employment opportunities in various industries.

**Occupational Projections**
Projections by occupation estimate the changes in occupational employment over time resulting from industry growth. Changes in the number, size and type of employers within a geographical area will affect the demand for certain occupations. Also, technological advances or changes in laws or regulations may affect the occupational mix.

General changes in the work place affect some occupations. Jobs may be created, eliminated or consolidated due to restructuring or regulations affecting the requirements for the job. For example, personal computers and word processing programs eliminated many typist jobs, but created a need for word processors.

An occupational title does not give details about the occupation. An individual starting a career search may want to look at the various occupations in this module, choose any that are of interest and then do further research. There are other sources of information for

occupations and their specifics, such as skills and educational requirements, hourly earnings, benefits, working conditions and advancement opportunities.

Occupational staffing patterns used for the projections process are developed from the annual OES Survey of employers. The survey utilizes a sample of the entire universe of Unemployment Insurance (UI) covered employers. Because it is a survey, it is important that the following points be considered:

- There is inherent statistical error as a result of both the sampling process and the level of employer response to the survey mailings.
- OES staffing patterns may contain errors due to problems employers may have in completing the survey. These errors typically include: misunderstanding of survey instructions, misinterpretation of occupational definitions and/or titles contained on the forms, and clerical errors in filling out the forms.
- The employer's response to the survey may reflect conditions that are atypical. They may be experiencing a temporary shutdown, seasonal high or low employment, or a temporary increase in demand for their product or service.

Occupational projections data indicate major occupations and which occupations are likely to offer the greatest number of job opportunities. When possible, the user should focus on larger groups rather than specific occupations. Some occupations may not appear in published tables because of the low number of people employed in that area or because of confidentiality concerns.

Although an occupation may be stable and not expected to grow, this does not mean that there are no opportunities for employment. All occupations have turnover opportunities. Individuals change or leave jobs permanently for varying reasons. High turnover, especially in occupations requiring lower skill levels, would mean that there are frequent openings even though there is little or no growth.

Occupational projections data are prepared for employment and training planners, vocational educators, and others who need information on future employment by occupation. The outlook information can be used in making occupational training decisions and career choices. Employers considering expansion or relocation may find the data helpful in understanding the occupational composition and trends in California and its 58 counties.

**Additional Sources of Information**

Additional information on economic conditions in a particular area can be accessed through Labor Market Information Division consultants, who provide information about economic activities within the counties they serve, and EDD One Stop locations, where additional publications and information may be obtained. Other sources include:

- Wage And Salary Employment by Industry
- Occupational Outlook Handbook (BLS)
- California Occupational Guides
- California Association for Local Economic Development
- Chambers of Commerce
- Economic Development Organizations
- Newspapers
- Standard Industrial Classification Manual

**Automated Access**

Electronic access to current data is available through the EDD's Internet address at:

**www.calmis.ca.gov**

For information about the Web site or to order publications, please call (916) 262–2162.

# Description of Projection Tables

**Employment** includes nonagricultural wage and salary workers, except for self-employed persons, unpaid family workers, private household workers, and those involved in labor-management trade disputes. An **industry division** refers to a distinct group of private, public or nonprofit enterprises engaged in producing goods or providing services. With the exception of government, industries are classified by the Standard Industrial Classification (SIC) system. Industries are then grouped into ten major categories according to the economic activity involved:

*Agriculture, Forestry, and Fishing* includes establishments primarily engaged in agricultural production, forestry, commercial fishing, hunting and trapping, and related services.

*Mining* includes all establishments involved in the extraction of minerals, crude petroleum and natural gas, including quarrying, milling and related activities.

*Construction* includes establishments engaged in contract construction, including new work, additions, and repairs performed by general and special trade contractors.

*Manufacturing (*includes establishments which are usually described as plants, factories or mills engaged in producing or processing nondurable or durable goods. These typically use power-driven machines and material-handling equipment.

*Transportation and Public Utilities* includes enterprises engaged in passenger and freight transportation by surface, water and air, warehousing and other transportation services. It also includes the communications complex of telephone, telegraph, radio and television; and the utilities providing gas, electric and sanitary services.

*Wholesale Trade* includes establishments involved in selling merchandise to industrial, commercial, farm, construction contractors and professional businesses; retailers; or other wholesalers.

*Retail Trade* includes establishments involved in the selling of merchandise for personal or household consumption and rendering services incidental to the sale of goods.

*Finance, Insurance, and Real Estate* includes banks, savings and loan institutions and security and commodity brokerages, insurance agencies and carriers, real estate sales and management offices, and rental and planning agencies.

*Services* includes establishments such as hotels, laundries, auto repair shops, theaters, legal services, advertising services, private schools and hospitals, and nonprofit organizations which are engaged in rendering a variety of services to individuals and businesses.

*Government* includes legislative, judicial, administrative and regulatory activities of federal, state, local and international governments; and federal, state and local government hospitals and education. Note also, for the federal government sector, employment includes all civilian employees regardless of the activities in which they are engaged.

**Industry Tables**

*Employment By Major Industry (Table 1)* This table shows 2001 estimated employment and 2008 projected employment along with the percentage of total employment for each major industry division.

*Employment By Industry (Table 2)* This table shows estimated employment for 2001 and projected employment by industry for 2008. The SIC code for each group is also listed. The "Employment Change" columns provide the projected change in employment between 2001 and 2008 and the percent change or growth rate over the seven-year period.

**Occupations** are classified on the basis of work performed and required skills, education, training, or credentials. Based on the Standard Occupational Classification (SOC) system, workers are classified at four levels of aggregation: major group; minor group; broad occupation; and detailed occupation. All occupations are clustered into one of the following 23 major occupation groups:

- *Management*
- *Business and Financial Operations*
- *Computer and Mathematical*
- *Architecture and Engineering*
- *Life, Physical, and Social Science*
- *Community and Social Services*
- *Legal*

- *Education, Training, and Library*
- *Arts, Design, Entertainment, Sports, and Media*
- *Healthcare Practitioners and Technical*
- *Healthcare Support*
- *Protective Service*
- *Food Preparation and Serving and Serving Related*
- *Building and Grounds Cleaning and Maintenance*
- *Personal Care and Service*
- *Sales and Related*
- *Office and Administrative Support*
- *Farming, Fishing, and Forestry*
- *Construction and Extraction*
- *Installation, Maintenance, and Repair*
- *Production*
- *Transportation and Material Moving Operations*
- *Military Specific Operations*

**Occupational Tables**

*Employment by Occupational Group (Table 3)* This table shows 2001 and 2008 employment and projected employment for major occupational groups. The "Absolute Change" column gives the number of job opportunities resulting from the creation of new jobs. "Percent Change" shows the percentage change for each occupational group.

*Occupations with the Greatest Job Growth (Table 4)* This table lists the 50 occupations that are projected to register the largest numerical change between 2001 and 2008. In general, these occupations are numerically large. Some have average projected rates of growth, but because of their employment size will add significant numbers of new jobs over the 2001–2008 period.

*Occupations with the Fastest Job Growth (Table 5)* This table lists the 50 occupations with the greatest projected percentage increases, providing a different perspective to future occupational employment changes. Please note that some of these are increasing rapidly from relatively small employment levels and not necessarily found in *Table 4*.

*Occupational Employment Projections (Table 6)* This table provides occupational detail for up to 800 occupations. Annual average employment in each occupation is shown for 2001 and 2008. The column headed "Number" under employment change presents the number of job opportunities resulting from the creation of new jobs. The "Percent" column shows the percentage change for each occupation. The next column,"Separations," shows job opportunities that are created by workers leaving the occupation.

Also included in this table is a codes column, showing the California SOC code for each occupational title. The Alphabetical Index of Occupations section may be used to locate occupations in the detailed table.

*Occupations With The Most Openings (Table 7)* This table lists the occupations projected to register the largest absolute growth and separations between 2001 and 2008.

*Occupations With Projected Job Loss (Table 8)* This table lists the occupations projected to decline over the 2001–2008 period. Declining employment is a sign that the occupation has no growth. However, turnover may result in some job opportunities.

# Industry Trends and Outlook

The Employment Development Department (EDD) projects that between 2001 and 2008, nonfarm employment at firms located in San Benito County is projected to grow by 1,880 jobs. This represents an average growth rate of about 2 percent per year. (Please note that the department does not include agriculture in this analysis.)

**Government** will add the largest number of jobs (450) in San Benito County between 2001 and 2008. Close to 90 percent of these jobs will occur at the local level as schools and other local levels of government provide for the needs of the growing population. Despite budget shortfalls, federal and state employment levels are expected to edge upward in line with local long-term trends.

**Manufacturing** will expand by about 400 jobs during the forecast period. More than three-fourths of the increase will be in durable goods manufacturing. Food processing and other nondurable goods companies will also add jobs.

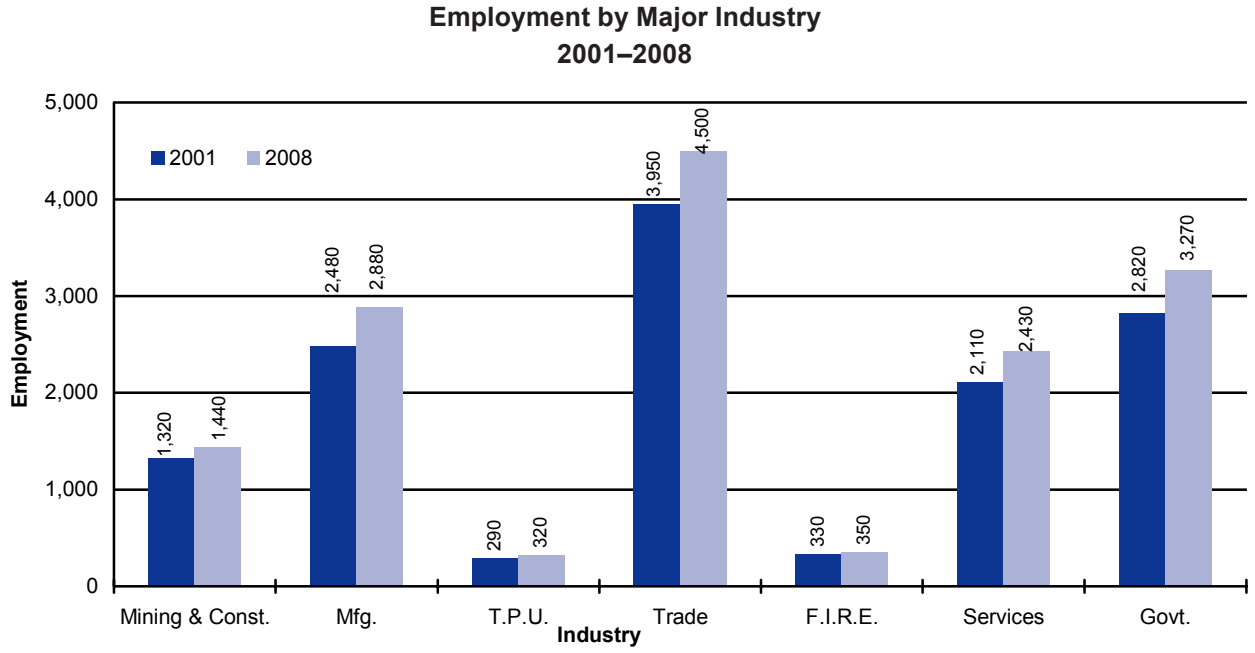
**Services** employment will rise by 320 jobs between 2001 and 2008. Health services will advance by 40 jobs. Hotels and other types of services (including public golf courses, religious organizations, child day care, and residential care) will also register gains.

**Retail trade** payrolls will increase by about 300 jobs over the projection period. Restaurants and bars are expected to add 70 jobs, while food stores will expand by 60 jobs. Various other types of retail stores (including department stores and car and boat dealers) will also record net increases.

**Wholesale trade** will add 250 jobs between 2001 and 2008.

**Construction and mining** is projected to show a net gain of 120 jobs between 2001 and 2008. However, new construction could be affected by a building moratorium enacted in San Benito County by the state Regional Water Quality Control Board.

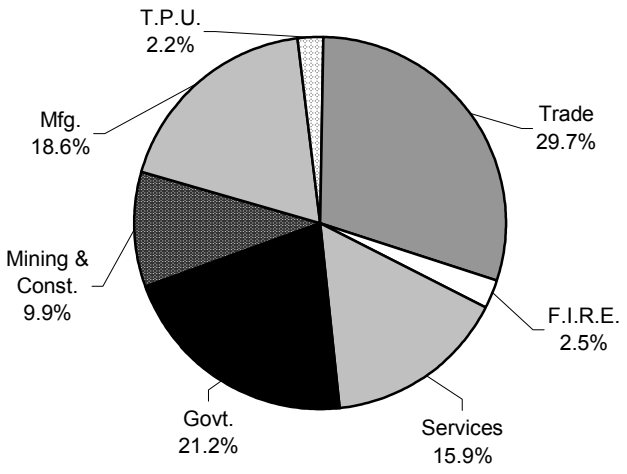
Both the **transportation and public utilities** and the **finance, insurance and real estate** industry divisions are expected to show small job gains over the seven-year projection period.



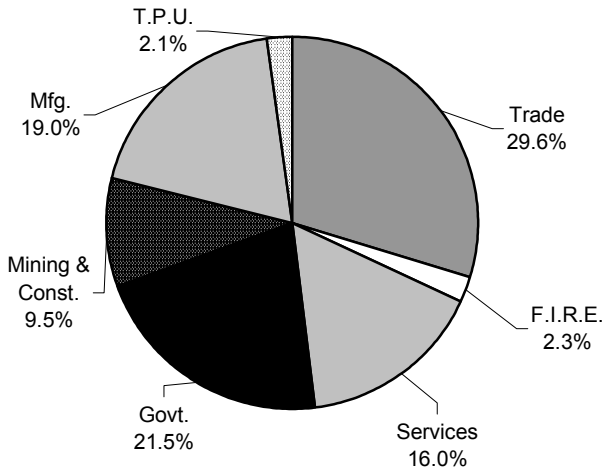
## Table 1: Employment by Major Industry[1]
## 2001 – 2008
## *San Benito County*

| Industry | 2001[2] | Percent of Total | 2008 | Percent of Total |
|---|---|---|---|---|
| **Total Nonfarm** | **13,300** | **100.0%** | **15,180** | **100.0%** |
| **Mining and Construction** | **1,320** | **9.9%** | **1,440** | **9.5%** |
| **Manufacturing** | **2,480** | **18.6%** | **2,880** | **19.0%** |
| **Transportation and Public Utilities** | **290** | **2.2%** | **320** | **2.1%** |
| **Trade** | **3,950** | **29.7%** | **4,500** | **29.6%** |
| **Finance, Insurance, and Real Estate** | **330** | **2.5%** | **350** | **2.3%** |
| **Services** | **2,110** | **15.9%** | **2,430** | **16.0%** |
| **Government** | **2,820** | **21.2%** | **3,270** | **21.5%** |

**2001 Employment**



**Projected 2008 Employment**



[1]Employment and projections contained in these tables are considered estimates (see introduction for a full explanation of data limitations). Employment is reported by place of work and excludes self-employed persons, unpaid family workers, domestics, volunteers, and those involved in labor-management trade disputes. These data are based on 1987 Standard Industrial Classifications. Annual average industry detail may not add up to totals due to independent rounding. Government data include all civilian government employees regardless of the activities in which they are engaged.

[2]March 2001 benchmark.

## Table 2: Industry Employment Projections[1]
## 2001 – 2008
## *San Benito County*

| Industry | SIC | Annual Average Employment | | Employment Change | |
|---|---|---|---|---|---|
| | | 2001[2] | 2008 | Number | Percent |
| **TOTAL NONFARM** | **10-99(ex 88), 074,075,078** | **13,300** | **15,180** | **1,880** | **14.1** |
| **GOODS PRODUCING** | **10-39** | **3,800** | **4,320** | **520** | **13.7** |
| **CONSTRUCTION AND MINING** | **10-17** | **1,320** | **1,440** | **120** | **9.1** |
| **MANUFACTURING** | **20-39** | **2,480** | **2,880** | **400** | **16.1** |
| Durable Goods | 24,25,32-39 | 1,730 | 2,040 | 310 | 17.9 |
| Nondurable Goods | 20-23,26-31 | 750 | 840 | 90 | 12.0 |
| Food and Kindred Products | 20 | 400 | 460 | 60 | 15.0 |
| Other Nondurable Goods | | 360 | 380 | 20 | 5.6 |
| **SERVICE PRODUCING** | **40-99(ex 88), 074,075,078** | **9,510** | **10,870** | **1,360** | **14.3** |
| **TRANSPORTATION AND PUBLIC UTILITIES** | **40-42,44-49** | **290** | **320** | **30** | **10.3** |
| Transportation | 40-42,44-47 | 230 | 250 | 20 | 8.7 |
| Communications and Public Utilities | 48,49 | 60 | 70 | 10 | 16.7 |
| **TRADE** | **50-59** | **3,950** | **4,500** | **550** | **13.9** |
| Wholesale Trade | 50,51 | 1,300 | 1,550 | 250 | 19.2 |
| Retail Trade | 52-59 | 2,650 | 2,950 | 300 | 11.3 |
| Food Stores | 54 | 480 | 540 | 60 | 12.5 |
| Eating and Drinking Places | 58 | 1,040 | 1,110 | 70 | 6.7 |
| Other Retail | | 1,130 | 1,300 | 170 | 15.0 |
| **FINANCE, INSURANCE, AND REAL ESTATE** | **60-65,67** | **330** | **350** | **20** | **6.1** |
| **SERVICES** | **70-89, 074,075,078** | **2,110** | **2,430** | **320** | **15.2** |
| Hotels and Other Lodging Places | 70 | 40 | 50 | 10 | 25.0 |
| Health Services | 80 | 380 | 420 | 40 | 10.5 |
| Other Services | | 1,690 | 1,960 | 270 | 16.0 |
| **GOVERNMENT** | | **2,820** | **3,270** | **450** | **16.0** |
| Federal Government | | 150 | 170 | 20 | 13.3 |
| State and Local Government | | 2,670 | 3,100 | 430 | 16.1 |
| State Government | | 160 | 190 | 30 | 18.8 |
| Local Government | | 2,510 | 2,910 | 400 | 15.9 |

[1]Employment and projections contained in these tables are considered estimates (see introduction for a full explanation of data limitations). Employment is reported by place of work and excludes self-employed persons, unpaid family workers, domestics, volunteers, and those involved in labor-management trade disputes. These data are based on 1987 Standard Industrial Classifications. Annual average industry detail may not add up to totals due to independent rounding. Government data include all civilian government employees regardless of the activities in which they are engaged.

[2]March 2001 benchmark.

# Occupational Trends and Outlook

Job growth or decline is influenced by the overall level of economic activity in a given area; that is, when economic activity refers to the overall economic growth or decline of industries and/or changes in occupation distributions within individual industries. Each area's economic climate influences the growth or decline of occupations that account for a large number of jobs within that area. In contrast, occupations with a small number of workers grow or decline as a result of the growth or decline of their specific industries.

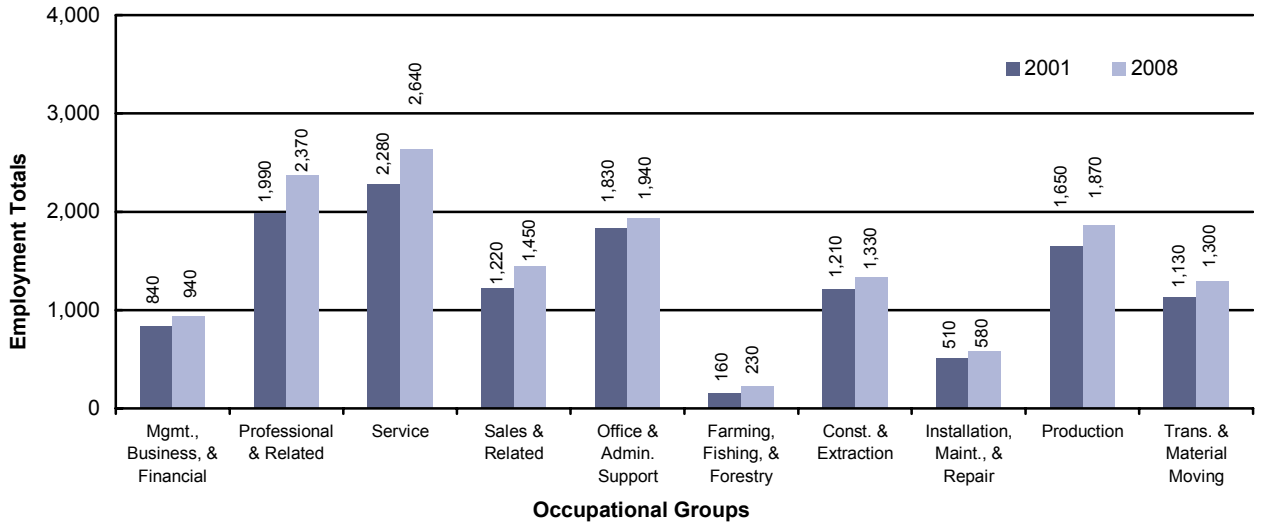
This section provides a discussion of major trends for occupation categories shown in **Table 6: Occupational Employment Projections** (beginning on page D-18). Projected changes in the level of employment in each occupation are an estimate of new job openings expected over a seven-year period. Separations, an estimate of the number of people leaving the workforce or an occupation, accounts for additional job openings. These estimates do not include job openings that are a result of people who change jobs but stay in the same occupation.

**San Benito County**

In 2001, San Benito County had a total of 13,300 workers employed in all industries. Employment projections call for that number to reach 15,180 by 2008. This represents an annual growth rate of 2 percent, a rate just below the 2.2 percent growth rate predicted for California as a whole. Separations will add another 2,260 job openings.

The largest occupational group in 2001 in San Benito County was *service occupations*. Service occupations employed 2,280 persons in 2001 and is projected to grow to 2,640 jobs by 2008, a 15.8 percent growth rate or 360 new jobs. The second-largest occupational group was *professional and related occupations* with employment of 1,990 in 2001. This group is expected to add 380 new jobs to reach 2,370 by 2008, a 19.1 percent growth rate. The third-largest group was *office and administrative support occupations* with 2001 employment of 1,830 and expected growth of 6 percent (110 jobs) to a 2008 total of 1,940. The fastest growing group is *farming, fishing, and forestry occupations* with a growth rate of 43.8 percent followed by *professional and related occupations* at a 19.1 percent growth rate.

The occupation with the greatest growth is *combined food preparation and service workers (including fast food)*, up 70 jobs (see **Table 4: Occupations with the Greatest Job Growth**). These jobs are found mostly at eating and drinking places; miscellaneous amusement (recreation services); retail bakeries; and elementary and secondary schools. *Cashiers* is also up 70 jobs, with employment largely in grocery stores; eating and drinking places; and



department stores. *Teacher assistants* is up 60 jobs. These jobs are primarily located in elementary and secondary schools; child day care services; and religious organizations. Fourth is *team assemblers*, which will add 60 jobs and are employed in fabricated structural metal products; motor vehicles and equipment; and miscellaneous chemical products. *Elementary school teachers (except special education)* will increase by about 50 new jobs, with employment in elementary and secondary schools.

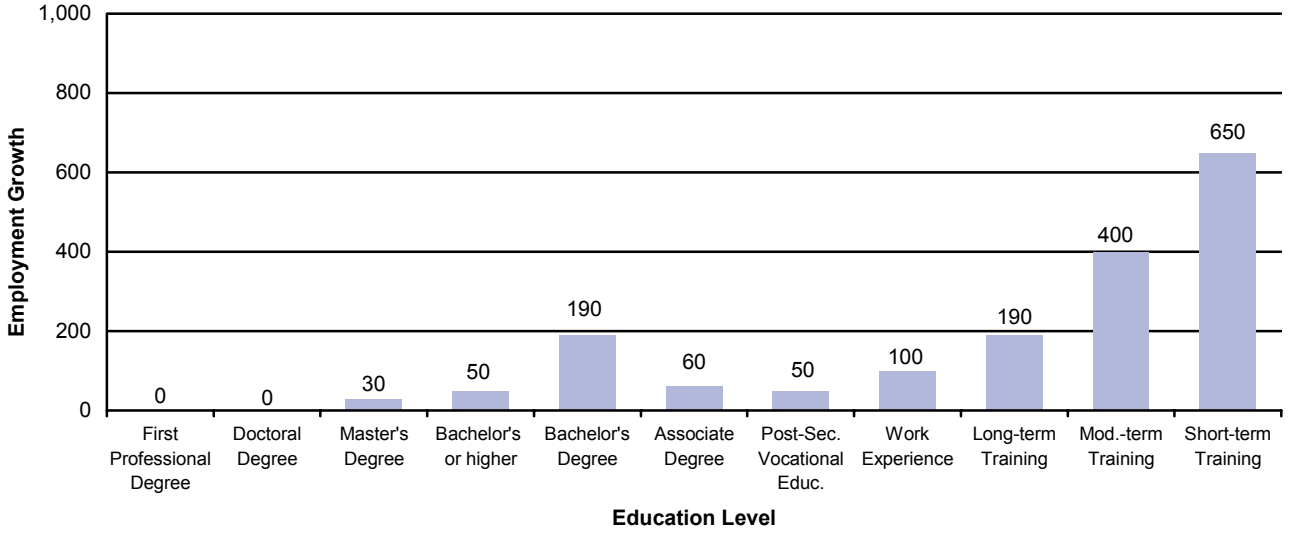
The fastest growing occupation will be *correctional officers and jailers*, up 50 percent (see **Table 5: Occupations with the Fastest Job Growth**). This occupation is concentrated in state government (except hospitals and education) and local government (except hospitals and education). The second-fastest growing occupation is *medical assistants*, which is up 28.6 percent, and employed mostly in offices of physicians (hospitals), and offices of other health practitioners. *Customer service representatives* is also projected to increase 28.6 percent in employment by 2008. These jobs occur in local government (except hospitals and education); hospitals; and fabricated structural metal products. Next is *registered nurses*, which will increase 27.3 percent. They are employed in hospitals; offices of physicians; and home health care services. *Industrial production managers* will be up 25 percent by 2008. Industrial production managers work predominately in millwork, plywood and structural members; beverages; and ordnance and accessories (not elsewhere classified).

**Training**

The greatest number of new jobs, 650 or 35 percent, in San Benito County will require **short-term on-the-job training**. The next largest number of new jobs, 21 percent or 400 jobs, will be entry-level, requiring **moderate-term on-the-job training**. Both **long-term on-the-job training** and **bachelor's degree or higher** categories each show an increase of 190 jobs or 10 percent.

The chart below displays the number of new jobs by education and experience levels. For more detailed descriptions of training levels, refer to the definitions on the following page.

**Employment Growth by Education and Experience Levels**
**2001–2008**



# Training Level Definitions

Occupational training and education classifications were developed by the Bureau of Labor Statistics to improve on prior classification systems that did not distinguish between occupations with comparable educational requirements. For example, neither carpenters nor laborers require formal education beyond high school, but the complexity of the work and the training time required results in carpenters being placed in the long-term on-the-job training category and laborers placed in the short-term on-the-job training category. Of course there is more than one way to qualify for a job. In this classification system, the education and training required reflects the manner in which most workers become proficient in that occupation and the preferences of most employers.

**First professional degree (1)**
Occupations that require at least two years of full-time academic study beyond a bachelor's degree (for example, law, medicine, dentistry and clergy).

**Doctoral degree (2)**
Occupations that require at least three years of full-time academic study beyond a bachelor's degree, culminating in a doctoral degree.

**Master's degree (3)**
Occupations that require the completion of a master's degree program, which is usually one to two years beyond a bachelor's degree.

**Bachelor's or higher, some work experience (4)**
Occupations that generally require work experience in an occupation requiring a bachelor's or higher degree. Most occupations in this category are managerial occupations that require work experience in a related non-managerial occupation.

**Bachelor's degree (5)**
Occupations that require the completion of at least 4, but not more than 5 years, of full-time academic study beyond high school resulting in a Bachelor's degree.

**Associate degree (6)**
Occupations that require the completion of at least 2 years of full-time academic study beyond high school.

**Post-secondary vocational education (7)**
Occupations that require completion of vocational school training.

**Work experience (8)**
Occupations that require skills obtained through work experience in a related occupation.

**Long-term on-the-job training (9)**
Occupations that require more than 12 months of on-the-job training or combined work experience and formal classroom instruction for workers to develop the skills needed for average job performance.

**Moderate-term on-the-job training (10)**
Occupations in which workers can develop average job performance after 1 to 12 months of combined on-the-job experience and informal training.

**Short-term on-the-job training (11)**
Occupations in which workers can develop skills needed after a short demonstration or up to one month of on-the-job experience and instruction.

## Table 3: Employment by Occupation Group
## 2001 – 2008
## *San Benito County*

| Occupational Group | 2001[1] | Percent of Total | 2008 | Percent of Total | Absolute Change | Percent Change |
|---|---|---|---|---|---|---|
| Total, All Occupations | 13,300 | 100.0% | 15,180 | 100.0% | 1,880 | 14.1% |
| Management, Business, and Financial | 840 | 6.3% | 940 | 6.2% | 100 | 11.9% |
| Professional and Related | 1,990 | 15.0% | 2,370 | 15.6% | 380 | 19.1% |
| Service | 2,280 | 17.1% | 2,640 | 17.4% | 360 | 15.8% |
| Sales and Related | 1,220 | 9.2% | 1,450 | 9.6% | 230 | 18.9% |
| Office and Administrative Support | 1,830 | 13.8% | 1,940 | 12.8% | 110 | 6.0% |
| Farming, Fishing, and Forestry | 160 | 1.2% | 230 | 1.5% | 70 | 43.8% |
| Construction and Extraction | 1,210 | 9.1% | 1,330 | 8.8% | 120 | 9.9% |
| Installation, Maintenance, and Repair | 510 | 3.8% | 580 | 3.8% | 70 | 13.7% |
| Production | 1,650 | 12.4% | 1,870 | 12.3% | 220 | 13.3% |
| Transportation and Material Moving | 1,130 | 8.5% | 1,300 | 8.6% | 170 | 15.0% |

[1]Total is based on the March 2001 Benchmark.

## Table 4: Occupations with the Greatest Job Growth[1]
## 2001 – 2008
## *San Benito County*

| SOC Code | Occupation | Annual Average Employment | | Employment Change | | BLS Training Level | Education/Experience |
|---|---|---|---|---|---|---|---|
| | | 2001[2] | 2008 | Number | Percent | | |
| 35-3021 | Comb Food Prep & Serving Wrkrs, Incl Fast Food | 460 | 530 | 70 | 15.2 | 11 | Short-Term On-The-Job-Training |
| 41-2011 | Cashiers | 440 | 510 | 70 | 15.9 | 11 | Short-Term On-The-Job-Training |
| 25-9041 | Teacher Assistants | 310 | 370 | 60 | 19.4 | 11 | Short-Term On-The-Job-Training |

# Standard Industrial Classification

The Standard Industrial Classification (SIC) is a nationally standardized system for identifying and coding business establishments according to their industrial activity. An "establishment" is an economic unit, generally located at a single physical location, where business is conducted or where services or industrial operations are performed. The Standard Industrial Classification (SIC) Manual is the reference guide used to accurately apply and/ or understand the classifi-cation coding system.

The SIC Manual's format separates industries into ten broad divisions, such as manufacturing and retail trade. Within those broad groupings are more specific two-digit codes, as well as more detailed three-digit and four-digit codes, that identify specific industries. Brief narratives describe the kinds of establishments contained in each classification category.

**Suggestions for Users**

The SIC Manual facilitates the collection, analysis and publication of information about business establishments. This standardized system is used throughout the United States to promote uniformity in the publications of private and governmental agencies. The Employment Development Department's field office personnel use the manual to assign SIC codes to employers to aid in providing services. Trade associations and private industry use the manual in reference books, such as the California Manufacturers Register.

The manual can help one to understand the composite industries summarized in publications. However, all public sector workers are usually grouped together into a category called "government", which includes federal, state and local government, and state and local education.

The U.S. Department of Labor, Occupational Safety and Health Administration provides SIC information on the Internet at:

**www.osha.gov**

The SIC Manual may be purchased from U.S. Government Bookstores, Bureau of Labor Statistics, or the Superintendent of Documents in Los Angeles or San Francisco. For information about purchasing this manual, contact:

U.S. Government Bookstore

# Standard Occupational Classification (SOC)

The Standard Occupational Classification (SOC) 1998 System was developed in response to a growing need for a universal occupational classification system—a system which would allow government agencies and private industry to produce comparable data. The SOC system was designed to cover all occupations in which work is performed for pay or profit and will be used by all federal agencies to classify workers into occupational categories for the purpose of collecting, calculating, or disseminating data.

Data collected by the 2000 Census of Population will be coded to the 1998 SOC; the Department of Labor's Occupational Information Network (O*NET), adheres to the 1998 SOC. In fact, all federal government agencies that collect occupational data are expected to adopt the 1998 SOC over the next few years.

**General Characteristics of the Revised SOC**
This system classifies workers at four levels of aggregation:

- major group
- minor group
- broad occupation
- detailed occupation

All workers are classified into one of over 820 occupations, according to their occupational definition. To facilitate classification, all occupations are clustered into one of 23 major groups. Within these major groups, there are 96 minor groups, and 449 broad occupations. Each broad occupation includes detailed occupation(s) requiring similar job duties, skills, education, or experience.

The following example shows the hierarchical structure of the 1998 SOC:

19-0000 Life, physical, and social science occupations (*major group*)

19-000 Life scientists (*minor group*)

19-1020 Biological scientists (*broad occupation*)

19-1021 Biochemists and biophysicists (*detailed occupation*)

19-1022 Microbiologists (*detailed occupation*)

19-1023 Zoologists and wildlife biologists (*detailed occupation*)

19-1029 Biological scientists, all other (*detailed occupation*)

Additional information, updated revision plans, and information on the implementation of the 1998 SOC are available at the Bureau of Labor Statistics (BLS) Internet site:

**www.bls.gov/soc/socguide.htm**

# North American Industry Classification System (NAICS)

The United States has a new industry classification system. The North American Industry Classification System (NAICS) will soon replace the U.S. Standard Industrial Classification (SIC) system.

The first-ever North American Industry classification system, NAICS was developed by the U.S., Canada and Mexico to provide comparable statistics across countries. For the first time, government and business analysts will be able to directly compare industrial production statistics collected and published in the North American Free Trade Agreement countries.

NAICS will reshape the way we view our changing economy. It is a unique, all-new system for classifying business establishments. It is the first economic classification system to be constructed based on a single economic concept. Economic units that use like processes to produce goods or services are grouped together. This "production-oriented" system means that statistical agencies in the United States will produce data that can be used for:

- measuring productivity, unit labor costs, and the capital intensity of production;
- constructing input-output relationships and;
- estimating employment-output relationships and other such statistics that require that inputs and outputs be used together.

NAICS responds to increasing and serious criticism about the SIC. NAICS reflects the structure of today's economy in the United States, Canada and Mexico, including the emergence and growth of the service sector and new and advanced technologies. It is a flexible system that allows each country to recognize important industries below the level at which comparable data will be shown for all three countries.

**NAICS-based statistics.**
Advance statistics will appear in early 1999. A report in 2000 will show relationships between NAICS and SIC industries. Implementation by Federal agencies will be in phases. Some agency programs will convert to NAICS as early as 1999, others as late as 2004.

**How is NAICS better?**
NAICS will make economic statistics more useful. It will improve basic benchmark and current performance statistics, like manufacturers' shipments, retail sales, and service receipts. It will improve statistics by providing an all-new industry classification system that is more:

*Relevant*. NAICS identifies new industries, revises concepts, and reorganizes classifications so that industry-classified statistics highlight businesses that contribute most to our economy.

*Consistent*. NAICS classifies businesses into industries based on one principle instead of several; the principle that businesses using similar production processes are classified together.

*Comparable*. NAICS provides the first-ever comparability in North American industry classifications and economic statistics.

*Flexible*. NAICS classifications will be updated regularly to keep pace with changes in our economy; every 5 years, all three North American countries will review NAICS and make needed revisions.

**How NAICS will affect the data you use.**
Every sector of the economy has been restructured and redefined:

- A new *Information* sector combines communications, publishing, motion picture and sound recording, and online services, recognizing our information-based economy.
- *Manufacturing* is restructured to incorporate high-tech industries, with a new subsector devoted to computers and electronics.
- *Retail Trade* is redefined. In addition, eating and drinking places are transferred to the new *Accommodation and Food Services* sector.
- The difference between Retail and Wholesale is now based on how each store conducts business.

For example, many computer stores are reclassified from wholesale to retail.

- Nine new service sectors and 250 new service industries are recognized.

**All new numbering system**

Numeric codes for each NAICS classification are completely different from those of the SIC. The new numbering system underscores the "clean slate" approach taken in NAICS and allows its classification changes to be fully developed.

The new system provides five levels of classification (up from four in the SIC), detailed codes that have a maximum of six-digits (up from four in the SIC) and detailed classifications called "U.S. Industry" (instead of "Industry" in the SIC). These changes require new numbers, even for industries that continue without change.

For example, both NAICS and SIC include the detailed industry, "Passenger car rental." However, in NAICS, it has code number 532111, and in the SIC, it was code number 7514. While all NAICS numeric codes are new, like the SIC, they are organized into multi-level hierarchical classification groups that build up from the detailed industry level.

The additional level of classification and expanded number of digits permit NAICS to account for the increased number of classifications, provide flexibility in structuring industry classification groups, and allow for country-based variations in classification detail.

A variety of resources are available to help users of business statistics understand and use NAICS. Additional information, answers to frequently asked questions, and updated agency implementation plans are available at the Census Bureau's Internet site:

**www.census.gov/naics**

Answers to classification and data program inquires may also be addressed to industry experts at:

**Phone: 1–888–75NAICS**

**Email: naics@census.gov**

# Projection Methods and Economic Assumptions

The employment projection process consists of two phases: first, projections for employment by industry are made using both historical data and current information about the economy. Next, the industry projections become a primary source used to project changes in occupational employment.

Changes in occupational employment over time result from two principal sources: industry growth and technological change. In developing occupational employment projections, both of these components must be addressed.

The following is a discussion of how industry and occupational projections are developed, beginning with a description of data sources and followed by a description of the steps involved.

**Principal Data Sources**

*Employment by Industry* The source of the official historical industry employment series used for industry projections for the state and each county is the Current Employment Statistics (CES) program. This is a Federal/State cooperative program that compiles monthly estimates of industry employment groupings for the state and each county. These monthly industry employment estimates are based primarily on employer sample surveys.

A second source used in industry forecasts is the Covered Employment and Wage Data, or ES-202 program. Essentially, this program extracts employment and wage information from quarterly tax returns filed by each California employer covered by unemployment insurance. Each employer has been assigned a specific industry and county code and these data are compiled to provide the 'actual' industry employment levels for each industry and county. These data are then used for benchmarking the monthly industry employment estimates made in the CES program. This is also a Federal/State cooperative program.

*Employment by Occupation* Occupational employment estimates are based on survey data collected through the Occupational Employment Statistics (OES) program. The OES survey is an annual mail survey of nonfarm employers conducted by EDD in cooperation with the U.S. Bureau of Labor Statistics. The survey is based on a sample designed to represent the universe of employers in each state. In California, data are collected for over 800 occupations at the three-digit SIC level of detail. The survey samples approximately 110,000 business establishments over a three year period.

**The Process**

*Industry Projections* Industry projections are first developed at aggregated levels (industry groupings) for the state and each county based on the Current Employment Statistics employment series.

Second, these aggregated industry projections are then broken down into more industry specific detail using the ES-202 data. The industry specific projections then become the primary source from which occupational projections are developed by using industry staffing patterns data. The following steps outline the process:

- Approximately every two years, industry employment projections are produced for the nation by the Bureau of Labor Statistics.
- Industry projections are then developed for the state using input from the national forecast and the historical industry employment series for the state.
- County industry projections are then developed using input from the state forecast and the historical employment series for each county.
- State projections are developed for ten years from the base period and county projections are developed for seven years from the base period.
- State forecasts are reviewed by LMID industry analysts, California's Department of Finance, and academics.
- County forecasts are reviewed by local area consultants who provide up-to-date information regarding recent developments in each county not normally accounted for in the model.

*Occupational Projections* The distribution of industry employment by occupation is performed in three steps.

- OES survey responses are summarized by industry and matched with appropriate SIC in the area. (In cases where local OES responses are not available, statewide responses or another area's responses are substituted.)

- The survey data are adjusted to total to the annual average employment level for each industry. This results in estimates of employment by occupation within the three-digit SICs for the base year.

- Finally, base year staffing patterns are adjusted to account for projected shifts in occupational distributions due to technological changes.

These projected changes are derived from special studies conducted by the U.S. Bureau of Labor Statistics. Applying these changes to the base year staffing patterns results in staffing patterns by three-digit SIC for the projected year. Projected year staffing patterns are applied to the industry employment projections to produce occupational employment projections within three-digit SICs. Data by occupation are then summed to get the occupational estimates. The difference between the base year occupation estimates and the projected year projections represents the job growth resulting from industry growth and from technological change. (Change factors do not try to predict regulatory changes.)

Demand for workers is also created by openings that result when workers leave jobs to enter other occupations, retire, or leave the labor force for other reasons. These openings, termed *separations*, are important because, in most occupations, they exceed job openings resulting from employment growth. Even occupations that are projected to decline usually provide job openings due to separations. Separations are developed from separation rates compiled on a national basis every two years by the Bureau Of Labor Statistics.

**Economic Assumptions**

The industry and occupational projections in this report are based on the following assumptions:

- The institutional framework of the U.S. economy will not change radically.

- Recent technological and scientific trends will continue.

- The long-term employment patterns will continue in most industries.

- Federal, state, and local government agencies will continue to operate under budgetary constraints.

- No major events, such as war, will occur that will significantly alter the industrial structure of the economy, the occupational staffing patterns, or the rate of long-term growth.

- Population growth rates and age distributions will not differ significantly from Department of Finance projections presently available.

- Attitudes toward work, education, income, and leisure will not change significantly.
